

QUALITY AND HMS POLICY

At K.A. Rasmussen as we have a quality and HSE policy that characterises the entire business. We shall manufacture and deliver products in accordance with applicable laws, regulations, standards, directives, internal and external requirements and specifications in a competitive manner that meets the needs, requirements and agreements of the authorities and our customers. Processes, management systems and activities are documented to demonstrate compliance.

We shall be proactive and risk assessments are carried out to provide an informative platform for our decisions and plans. Based on this, we are continuously working to improve our quality, HSE management system and our performance by setting long-term goals. As part of this nonconformities are recorded and followed up to form a good basis for continuous work on process improvement as well as to better our daily routines.

We wish to have satisfied customers and are therefore actively asking for marked information to improve our products and services. As a chemical industry company, K.A. Rasmussen as has a great responsibility to its employees, neighbours and stakeholders when it comes to environmentally responsible operations. Areas that are of high focus are emissions to air and water, energy management, as well as good and correct sorting and handling of all waste. Our activities are carried out in a sound, organized and secure manner, so that human life and health, the external and internal environment, as well as material values are protected and not harmed.

Research and development are also in high focus and we are proactively working on making our processes more efficient and environmentally friendly, while at the same time working to develop new technologies and products. If a customer comes with new wishes or challenges, we go to great lengths to try to meet them and after more than 145 years of experience we have gained significant competence in our field.
